Valued Supplier,

I wanted to let you know that we used CST 437 (LPOTP inducer puller system) for the first time today on a flight turbopump that returned to Canoga Park from the last Space Shuttle flight for overhaul. It was like a county fair. All kinds of people came into the clean room to watch the process. I was waiting for the clowns to come out of the tool cabinets. There were some very high ranking NASA folks from Huntsville Alabama (Marshall) who just happened to be in town and they were present for the festivitie. The Boltech system worked flawlessly. All present were very impressed with the equipment and the process.

One thing I would like to add; We, the Space Shuttle family welcome you and your employees to the Shuttle family. When your folks see those three main liquid propellant engines ignite on the back of the Shuttle you and your employees helped to make that happen. Take pride in your efforts. That vehicle is as much yours as it is ours.

Great job, thank you "Boltech" !!! Please thank all the folks at West Newton. Feel free to share this e-mail with them if you so choose.

Sincerely,

Tom
